PROFESSIONAL SUMMARY

Product-minded mobile engineer with **10 years** shipping production apps. Technical Lead and sole developer of **Explora Prado**, a Flutter app for the Museo del Prado **live on the App Store and Google Play**: I designed and built the full product end to end, from Clean Architecture with BLoC and a **Firebase** backend to in-app purchases on both stores, release pipeline and a Flutter Web back office. Before that, 4.5 years at **OLX** as technical lead of an internal Android Ads SDK used by three apps with tens of millions of active users (test coverage from 14% to 70%), plus earlier product work at Wegow and Instantgo. I work daily with AI-assisted development (Claude Code, Cursor) with critical review, and I am building a privacy-first health app that combines on-device (Gemini Nano) and cloud AI.

CORE SKILLS

Flutter & Dart: **Flutter (production)** Dart, BLoC, Clean Architecture, GetX (navigation and DI), in_app_purchase, Flutter Web, platform channels, TDD

Firebase: **Firebase (Expert)** Authentication, Firestore, Realtime Database, Storage, Cloud Functions, Analytics, Crashlytics, Remote Config, App Check, App Distribution

AI workflow: **Claude Code (daily)** Cursor, AGENTS.md, custom skills, automated test-debug loops; Gemini Nano (AICore) and cloud AI in a personal project

Native mobile: **Kotlin (Expert)** Jetpack Compose, Coroutines & Flow, Room, Hilt, Dagger 2; Kotlin Multiplatform (personal projects), SwiftUI (Familiar)

Architecture & quality: Clean Architecture, MVVM, MVI, modular design, ADRs, JUnit, MockK, Roborazzi, JaCoCo, Detekt, ktlint

Product & delivery: A/B testing, Amplitude, CleverTap, Google Analytics, Stripe, GitHub Actions, Fastlane, feature flags, store releases

PROFESSIONAL EXPERIENCE

Technical Lead (Freelance) | Explora Prado (Museo del Prado app) Jan 2026 - Present

Spain (remote) · Sole developer · Live on the App Store and Google Play

- Designed, built and shipped the full product alone: Android and iOS apps from a single **Flutter** codebase using Clean Architecture with **BLoC** for state and GetX for navigation and dependency injection, with a layered DTO / Entity / Model data structure.
- **Firebase** backend: Authentication, Firestore, Storage, Analytics and Crashlytics; offline synchronisation for a content-heavy museum experience (interactive quizzes, multimedia guides).
- Implemented in-app purchases on both stores with purchase verification and entitlement persistence, dynamic localisation (Spanish and English live) and Firebase A/B tests on onboarding, content and conversion flows. Built the Flutter Web back office for operators and own the release pipeline.
- Deliver solo at team speed through an AI-first workflow (Claude Code, Cursor, custom skills, AGENTS.md / DESIGN.md patterns, automated test-debug cycles) backed by TDD and critical review of generated code.

Senior Android Engineer | OLX / Letgo Jul 2021 - Jan 2026

Barcelona (remote) · Teams in Istanbul, New Delhi, Poznań and Lisbon · Tens of millions of active users

- Technical lead and sole Android engineer of the internal Ads SDK for most of its lifecycle, powering monetisation across the Horizontals, Real Estate and Motors apps.
- Defined the **api/impl** modular architecture for safer partner integrations and standardised builds with Gradle convention plugins and version catalogs; led migrations from XML to Jetpack Compose and from callbacks to Coroutines/Flow with backward compatibility.
- Raised test coverage from 14% to 70% (JUnit, MockK, Robolectric, Espresso, JaCoCo) with Detekt and ktlint in CI; owned releases through Maven Publish and feature-flagged rollouts.
- Ran A/B tests (Amplitude, CleverTap, Google Analytics) on ad placements and SDK changes; led privacy-first decisions (consent, IAB TCF, GDPR). Wrote some Flutter code alongside native work.

Senior Android Developer | Wegow (ticketing & payments) Sep 2019 - Jul 2021

Madrid (remote) · Sole Android developer

- Stabilised the inherited Java app while shipping features, then led a ground-up Kotlin v2 (Dagger 2, MVVM, Clean Architecture) that is still in production. Stripe and Redsys payments, Firebase push notifications, analytics and Crashlytics, TDD throughout.

Android Developer | Instantgo (on-demand marketplace) Jul 2018 - Sep 2019

Madrid (remote) · Product built from scratch

- Built the Android app to feature parity with iOS (Kotlin, MVVM, Clean Architecture); Stripe payments, paid 1:1 video with Twilio, and Firebase Authentication, Realtime Database, Storage, Cloud Functions and A/B tests.

Android Developer (Java & Kotlin) | Telefónica, UXSmobile, Mobile One2One, AvantGarde IT Sep 2015 - Jul 2018

Madrid · Movistar TV · Evo Banco · Carrefour, Alsa, Iberostar · Indra, DGT

- Built Java and Kotlin Android apps in banking, TV and retail. On Movistar TV (Android TV): ExoPlayer and Leanback UI in a Scrum team. On Evo Banco: Clean Architecture/MVP modules under banking security standards.

PROJECTS & CODE

- **Health app (Android), personal project:** Health Connect data with on-device Gemini Nano (AICore) plus cloud AI to interpret metrics, local-first for sensitive data. Code private for now; happy to walk through it.
- **Multiverse Explorer (Kotlin Multiplatform), 2026:** shared Kotlin core with native Jetpack Compose and SwiftUI UIs; REST and GraphQL over one Ktor client, 1,550+ tests and a GitHub Actions PR gate. github.com/davidru85/RickAndMorty
- **carApp (Kotlin Multiplatform):** offline-first vehicle-cost tracker for Android and iOS with Firebase/Firestore backup and anonymous-first authentication; TDD and protected CI. github.com/davidru85/carApp

EDUCATION

B.Sc. Computer Science, Information Systems Management · Universidad de La Rioja, Spain · 2012 · Final Year Project on Android, grade 9/10

LANGUAGES

Spanish: Native · **English:** Professional working proficiency, years of daily use in international teams · **Portuguese:** Elementary
