

DAVID RUIZ URRACA

Senior Mobile Engineer · Android · Flutter · KMP

+34 644 627 262 · david@ruizurraca.com · linkedin.com/in/davidru85

AVAILABLE FOR REMOTE ROLES

PROFESSIONAL PROFILE

Senior Mobile Engineer with **10+ years** building production Android applications at scale, with a strong cross-platform track record in Flutter and active Kotlin Multiplatform adoption. Currently CTO and sole developer of **Explora Prado** (Flutter), an app for Museo del Prado that received an Art-Tech 2025 Honorable Mention and was selected for Santander X Explorer 2026. Previously, owned an internal Android Ads SDK end-to-end at OLX Group — versioning strategy, backward compatibility, GDPR consent flows, and integration ergonomics for partner teams across three major consumer apps serving tens of millions of active users.

I advocate for TDD (Test-Driven Development) and generative AI/agent workflows as core engineering practices — leveraging Claude Code, Cursor, Codex, and Ollama alongside custom skill packages, terminal-integrated command loops, automated test-debug cycles, and structured AGENTS.md/DESIGN.md patterns to keep AI-assisted development fast, reproducible, and team-ready across collaborators. On personal projects I also work hands-on with health and on-device AI integrations — building with the **Health Connect API** and Android's **AICore** (on-device Gemini Nano) for private, local-first features.

PROFESSIONAL EXPERIENCE

CTO & Lead Mobile Developer

Jan 2026 – Present

Explora Prado · Spain (Remote)

Award-winning Flutter app turning Museo del Prado's permanent collection into a self-guided digital experience. Art-Tech 2025 Honorable Mention · Santander X Explorer 2026.

- Sole owner of the full technical platform: architecture, implementation, release pipeline, and the upcoming App Store / Google Play launch.
- Built the app end-to-end on Flutter/Dart with Clean Architecture + BLoC and a layered data model (DTO / Entity / Model) backed by Firebase and Firestore.
- Implemented in-app purchases on both stores (`in_app_purchase`), including purchase verification flow and entitlement persistence — a non-trivial native integration on Android and iOS.
- Built dynamic multi-language support and adaptive UI for a content-heavy museum experience with SVG assets, custom typography, and Flutter Web.
- Developed core features (interactive quiz system, multimedia guides, and payment flows) using Test-Driven Development (TDD) to ensure robust offline synchronization and application reliability.
- Scaled output as a solo developer through an AI-first workflow leveraging Claude Code and Cursor alongside custom skill packages, terminal command loops, and structured AGENTS.md / DESIGN.md patterns.
- Represent the technical side in the Santander X Explorer 2026 programme.

Senior Android Engineer

Jul 2021 – Jan 2026

OLX / Letgo · Barcelona (Remote)

Android development for a leading global marketplace operating in Poland, Portugal, Turkey, India, Indonesia, and LATAM.

- Architected and maintained the internal Android Ads SDK powering monetisation across three major consumer apps in the OLX portfolio, serving tens of millions of active users.
- Designed an `api/impl` module separation pattern enforcing strict dependency boundaries — improved build times and made partner-team integrations safer and more predictable.
- Drove privacy-first decisions across the SDK: consent state management, scoped tracking, GDPR and Android Privacy Sandbox compliance.
- Led migration of critical SDK surfaces from XML to Jetpack Compose and from callback-based async to Kotlin Coroutines & Flow, while maintaining backward compatibility.
- Leveraged Test-Driven Development (TDD) with JUnit and MockK to design the SDK APIs, ensuring zero regression across host apps.
- Owned SDK lifecycle end-to-end: versioning strategy, integration documentation, and mentoring partner-app teams on consumption patterns.
- Contributed cross-team feature work on consumer apps, reinforcing SDK integration patterns from the consumer side.
- Led cross-platform coordination with the iOS SDK team to synchronize API designs, telemetry schemas, and release lifecycles, establishing a unified integration standard for client teams.
- Tracking and analytics integration: Amplitude, CleverTap, Google Analytics, Crashlytics.

Senior Android Developer

Sep 2019 – Jul 2021

Wegow · Madrid (Remote)

Sole Android engineer — owned the full app end-to-end: architecture, feature delivery, and production stability across a heterogeneous device base.

- Rebuilt the app from scratch on Kotlin + MVVM / Clean Architecture, migrating from a legacy codebase to a foundation ready for product growth.
- Drove Java → Kotlin transition and Dagger 1 → Dagger 2 migration while keeping the app continuously shipping.
- Integrated Spotify streaming, payment gateways for ticket purchases, and geolocation tooling for event discovery.
- Implemented Test-Driven Development (TDD) as a core practice to ensure high reliability and a regression-free codebase during critical migrations.
- Coordinated directly with the iOS developer to align feature contracts, analytics schemas, and release cycles, driving joint initiatives to unify product behavior across both platforms.

Android Developer

Jul 2018 – Sep 2019

Instantgo · Madrid (Remote)

- Built the Android app from scratch and brought it to feature parity with the existing iOS app, for a product (paid 1:1 video-call marketplace + job board) with a user base primarily in the US.
- Integrated paid 1:1 video calls with Twilio, managing session and connection lifecycle.
- Implemented the in-app payment flow with Stripe for booking paid video calls.
- Integrated the Firebase ecosystem (authentication, push notifications, analytics, Crashlytics, Realtime Database, and App Distribution for build delivery) with Dagger 2 for dependency injection.
- Sole Android developer — built the app from scratch with full technical autonomy in a fast-paced startup, using Kotlin + MVVM / Clean Architecture.

Android TV Developer

Mar 2018 – Jul 2018

Telefónica · Madrid

- Developed features for the Movistar TV Android TV surface with D-pad navigation and Leanback UI components.
- Worked with ExoPlayer for video playback and integrated custom JavaScript components into the Android TV surface.
- Worked in a Scrum team applying MVP and Kotlin within a large-organization delivery process.

Android Developer

Dec 2017 – Mar 2018

UXSmobile · Madrid

- Built new modules for the BMI – Evo Banco app with Clean Architecture + MVP in Kotlin.
- Implemented secure REST integrations with Retrofit and local persistence with Room.
- Worked under banking-sector quality and security standards.

Android Developer

Nov 2016 – Dec 2017

Mobile One2One · Madrid

- Delivered native Android apps for enterprise clients in retail, transport, and hospitality (Carrefour, Alsa, Iberostar, Baleària, Meliá).
- Built features end-to-end with MVP / Clean Architecture, primarily in Java while taking my first steps with Kotlin.
- Integrated REST APIs (Retrofit) and offline persistence (Realm), implementing custom UI designs.
- Adapted to differing requirements and codebases per client within an agency delivery model.

Android Developer

Sep 2015 – Nov 2016

AvantGarde IT Services · Madrid

- Built and shipped client-facing Android apps in Java for public-sector and enterprise clients (Indra, DGT, Atenzia, Brightstar).
- Developed in Java using mainly AsyncTasks, starting to incorporate libraries such as Retrofit, ButterKnife, and an early version of Dagger.
- Built UIs in XML and contributed across the full feature lifecycle.

SPEAKING & OPEN SOURCE

- **Android Development Instructor (Internal):** Led hands-on Android training internally within the company, upskilling engineering colleagues on Kotlin adoption, clean architecture, and modern Jetpack libraries.
- **Open Source Contributor:** Active contributor to community projects (such as Organic Maps), resolving platform-specific synchronization bugs and mapping inconsistencies between Android and iOS surfaces.
- **Internal SDK Guidelines & Documentation:** Authored internal company playbooks for SDK integration, GDPR consent management, and modular library architecture, used by partner teams within the organisation.

TECHNICAL SKILLS

Languages	Kotlin · Dart · Java · XML · JSON
Android	Jetpack Compose · MVVM / MVI / Clean Architecture · Coroutines & Flow · RxJava · Hilt · Dagger 2 · Koin · Retrofit / Ktor · Coil · Room · WorkManager · JUnit · MockK · GitHub Actions · Android TV · Health Connect API · AICore (on-device Gemini Nano) · Material Design
Flutter	BLoC · Clean Architecture · in_app_purchase · Firebase · Firestore · App Check · Flutter Web · Platform Channels
Exploring	Kotlin Multiplatform (KMP) · Compose Multiplatform · SQLDelight · Ktor multiplatform · React Native (beginner)
AI Tooling	Claude Code (daily) · Cursor · Codex · Ollama · Windsurf · Gemini · custom skill packages (FastAPI SSE, Flutter IAP, httpx, pytest) · terminal command loops · automated test-debug cycles · .cursorsrules · AGENTS.md / DESIGN.md patterns · Qwen · MCP
Cloud	Firebase suite · Google Ads SDK · Amplitude · CleverTap · Crashlytics
Tools	Android Studio · VS Code · Git · Gradle (Kotlin DSL / Groovy) · CI/CD
Methodologies	Agile · Scrum · Kanban · JIRA

EDUCATION

B.Sc. Computer Science (Information Systems Management)
Universidad de La Rioja · Spain

2003–2006 / 2011–2012 · Final Year Project on Android platform
— Grade: 9/10

LANGUAGES

Spanish	Native
English	Upper-Intermediate
Portuguese	Elementary
