Spain · Available for 100% Remote Work

PROFESSIONAL SUMMARY

Product-minded **Android Product Engineer** with Android engineering experience since 2015 and **Kotlin** as my main language. Long-tenured: **4.5 years at OLX Group** and nearly 2 years at Wegow, owning features from problem definition with product, design and QA through release, measurement and iteration. At OLX I owned an internal **Android Ads SDK** built as a **multi-module** platform (api/impl boundaries, versioning, backward compatibility) serving **tens of millions of users**, and modernised **legacy code** incrementally (XML to **Jetpack Compose**, callbacks to **Coroutines & Flow**) with zero regressions and without slowing product delivery, raising **test coverage from 14% to 70%** through **TDD**. I use **AI tools naturally in daily work** (Claude Code, Cursor, MCP servers, custom AI skills) and have shipped Explora Prado, a live Flutter product on the App Store and Google Play, as a sole developer. Comfortable proposing, questioning and defending technical decisions.

CORE SKILLS

Languages: **Kotlin (Expert)**, Java, Dart, Swift (Familiar), TypeScript (Familiar), JavaScript (Familiar), XML, JSON

Android & UI: **Jetpack Compose (Expert)**, Material Design, Material 3 Expressive, Navigation Compose, accessibility, design systems and design tokens, Figma handoff, View system / XML layouts, Android TV (Leanback), ExoPlayer, WorkManager, Timber, Baseline Profiles, Macrobenchmark, R8

Architecture & Async: **Clean Architecture (Expert)**, MVVM (Expert), MVI, Unidirectional Data Flow, MVP, **multi-module architecture**, api/impl module boundaries, Coroutines & Flow (Expert), RxJava, LiveData, ViewModel, Architecture Decision Records (ADRs)

Dependency Injection: Hilt (Expert), Dagger 2 (Expert), Koin

Networking & Data: Retrofit (Expert), OkHttp, Ktor, GraphQL, REST, Gson, Jackson, kotlinx.serialization, Room (Expert), DataStore, Coil, Glide

Testing & Quality: **TDD (Expert)**, JUnit (Expert), MockK (Expert), Espresso, Robolectric, Compose UI testing, Roborazzi screenshot testing, contract testing, MockWebServer, JaCoCo, Detekt, ktlint, Android Lint

CI/CD & Build: GitHub Actions (Expert), Jenkins, Fastlane, Gradle Kotlin DSL (Expert), version catalogs, convention plugins, composite builds, build flavors, Maven Publish, Artifactory, AAR, Git (Expert)

Analytics & Event Tracking: Amplitude, Google Analytics, CleverTap, Firebase Analytics, Crashlytics, analytics events decoupled behind provider abstractions, A/B testing and experimentation, feature flags, Remote Config

Multiplatform: Kotlin Multiplatform (shared domain, data and presentation layers), Compose Multiplatform, Flutter / BLoC, React Native (Familiar), SwiftUI (Familiar), SQLDelight (Familiar), Ktor Multiplatform

AI-Assisted Development: Claude Code (daily), Cursor, Codex, Ollama, MCP Servers, AI skills and custom skill packages, AGENTS.md / DESIGN.md patterns, on-device AI (AICore / Gemini Nano), Health Connect API

Privacy, Payments & Cloud: GDPR (Expert), IAB TCF, Google UMP, Android Privacy Sandbox, Firebase suite (Expert), Stripe, Redsys, in-app purchases, Twilio, Google Ad Manager

Ways of Working: Agile, Scrum, Kanban, JIRA, close collaboration with PM, UX, QA and iOS teams, internal talks and knowledge sharing

PROFESSIONAL EXPERIENCE

Technical Lead (Freelance) — Explora Prado, Museo del Prado — Jan 2026 – Present

Spain (Remote) · Flutter product live on the App Store and Google Play · Art-Tech 2025 Honorable Mention · Santander X Explorer 2026

- Own the product end to end as sole developer: from problem definition to architecture (Clean Architecture, BLoC, Firebase), implementation, release pipeline and live store releases for Android and iOS.
- Built the in-app purchase platform for both stores, with purchase verification and entitlement persistence; run Firebase A/B tests on onboarding, content presentation and conversion flows.
- Implemented the Figma design specifications with adaptive UI, dynamic localisation (ES/EN live) and offline sync; built the internal content back office in Flutter Web; developed with TDD.
- Scale solo delivery with an AI-first workflow: Claude Code, Cursor, custom skill packages, automated test-debug loops and structured AGENTS.md / DESIGN.md patterns.

Senior Android Engineer — OLX / Letgo (Android Ads SDK platform) — Jun 2021 – Jan 2026

Barcelona (Remote) · 4.5 years · Kotlin · Teams across Istanbul, New Delhi, Poznań and Lisbon

- Owned the internal Android Ads SDK as a multi-module mobile platform powering monetisation across OLX's Horizontals, Real Estate and Motors verticals, with market-specific builds serving tens of millions of active users. Technical lead and sole Android engineer for most of its lifecycle.
- Reduced technical debt incrementally without stopping product delivery: led the migration of critical surfaces from XML to Jetpack Compose and from callbacks to Coroutines and Flow with zero regressions, keeping backward compatibility for partner teams.

- Designed the api/impl module boundary to enforce dependency isolation, make partner integrations safer and improve build performance; standardised builds with Gradle convention plugins, version catalogs and composite builds.
- Applied TDD and automated testing (JUnit, MockK, Robolectric, Espresso, MockWebServer, JaCoCo) to raise test coverage from 14% to 70%, with Detekt, ktlint and quality gates on every pull request.
- Challenged recurring bug patching and proposed an explicit integration contract with documented trade-offs; owned versioning, AAR packaging, Maven Publish distribution (Artifactory, Maven Central), documentation and partner-team enablement.
- Aligned product, design, backend and QA stakeholders during the merge of two OLX apps for India and Indonesia, using a phased plan and clear communication; coordinated API, telemetry and release lifecycles with the iOS SDK team.
- Led privacy-first decisions (GDPR, IAB TCF, Google UMP, Android Privacy Sandbox); applied Baseline Profiles and Macrobenchmark to critical surfaces; integrated Amplitude, CleverTap, Google Analytics and Crashlytics and ran A/B tests to validate changes against monetisation and engagement metrics.

Senior Android Developer — Wegow (Live-music events and ticketing) **Sep 2019 – Jun 2021**

Madrid (Remote) · Company's only Android developer · Kotlin

- Stabilised the inherited Java application (deprecated libraries, Dagger 1) while continuing feature delivery, then led a ground-up Android v2 in Kotlin with Dagger 2, MVVM and Clean Architecture, keeping the legacy version running during the transition. The v2 still underpins the company's product years after my departure.
- Built core functionality with Room, LiveData, ViewModels, Coroutines and Glide; integrated Firebase (push, analytics, Crashlytics), Stripe and Redsys payments, and the Google Maps SDK. Applied TDD throughout the rebuild.
- Coordinated with the iOS developer on feature contracts, analytics schemas and release cycles; used A/B testing to validate UX and conversion changes in ticketing and event discovery.

Android Developer — Instantgo (On-demand services marketplace) **Jul 2018 – Sep 2019**

Madrid (Remote) · Sole Android developer · Kotlin

- Built the Android app from scratch to feature parity with iOS (Kotlin, MVVM, Clean Architecture, Retrofit, Room, LiveData, Dagger 2); integrated paid 1:1 video sessions with Twilio and booking payments with Stripe.
- Integrated the Firebase suite (Authentication, Realtime Database, Cloud Functions, Storage, Analytics, Crashlytics, App Distribution) and ran Firebase A/B tests to optimise booking and session-conversion flows.

Android Developer — Earlier Roles: Consulting and Agency Projects **Sep 2015 – Jul 2018**

Madrid · Telefónica (Movistar TV, Android TV) · UXSmobile (Evo Banco) · Mobile One2One (Carrefour, Alsa, Iberostar, Baleària, Meliá) · AvantGarde IT Services (Indra, DGT)

- Delivered native Android applications for enterprise, banking, retail, transport and public-sector clients, progressing from Java, AsyncTasks and XML UIs to Kotlin, Clean Architecture, MVP, Retrofit, Room and Realm; Leanback and ExoPlayer for Android TV.

SIDE PROJECTS

Multiverse Explorer (Kotlin Multiplatform, Android and iOS) — github.com/davidru85/RickAndMorty

- One shared Kotlin core behind two native UIs (Jetpack Compose with Material 3 Expressive, SwiftUI with Liquid Glass); 13 Gradle modules under Clean Architecture with enforced api/impl boundaries, REST and GraphQL over Ktor, design tokens kept in sync with Figma, 1,550+ automated tests and a GitHub Actions quality gate.

carApp (Kotlin Multiplatform, Android and iOS) — github.com/davidru85/carApp

- Offline-first vehicle-cost tracker sharing domain, data, sync and presentation logic across Jetpack Compose and SwiftUI, with SQLDelight, Firebase backup, TDD and protected CI.

Personal Health App (Android) — In Development

- Privacy-first app built on Health Connect that pairs on-device AI (AICore / Gemini Nano) with cloud AI, local-first by design.

EDUCATION

B.Sc. Computer Science (Information Systems Management) — Universidad de La Rioja, Spain · Graduated 2012 · Final Year Project on Android, grade 9/10

LANGUAGES

Spanish: Native · English: Professional working proficiency, years of daily use in international teams · Portuguese: Elementary

KNOWLEDGE SHARING AND INTERESTS

Internal talks and hands-on training on Kotlin, Clean Architecture and modern Jetpack libraries; internal SDK playbooks. Interests: 360° photography, motorcycling and travel, running and CrossFit, home automation, music.
